                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-949-016-17583/c

US-09-949-016-17583/c

Sequence 17583, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES;

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

                                                                                                                                                   and mouse cDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Acts at E2F-responsive promoters to integrate signals provided by PHD- and/or bromodomain-containing transcription factors. Stimulates E2F-1/DP-1 transcriptional activity. Renders the activity of cyclin D1/CDK4 resistant to the inhibitory effects of P16(INK4a).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -ELDEAELDYLMDVLVG

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Acts at E2F-responsive promoters to integrate signals provided by PHD- and/or bromodomain-containing transcription factors. Stimulates E2F-1/DP-1 transcriptional activity. Renders the activity of cyclin D1/CDK4 resistant to the inhibitory effectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TIF1

FUNCTION: Acts at E2F-responsive promoters to integrate signal provided by PHD- and/or bromodomain-containing transcription factors (By similarity).

SIMILARITY: Belongs to the TRIP-Br family.

SIMILARITY: Contains 1 SERTA domain.
                                                                                of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -APAPALPPEPLFLGE-

                                                                                                 TISSUE SPECIFICITY: Expressed preferentially in hematopoieti progenitors and mature blood cells. Expressed at low levels heart, lung, spleen, and thymus and at a higher level in mus DEVELOPMENTAL STAGE: Developmentally regulated. Preferential expression in both fetal and adult hematopoietic progenitors mature blood cells during embryonic and adult hematopoiesis. SIMILARITY: Belongs to the TRIP-Br family.
                                                                                                                                                                                                      This SWISS-PROT entry is copyright. "Prediction of the coding sequences of unidentified human genes. IV
The coding sequences of 40 new genes (KIAA0121-KIAA0160) deduced by
analysis of cDNA clones from human cell line KG-1.";
DNA Res. 2:167-174(1995).
-!- FUNCTION: Acts at E2F-responsive promoters to integrate signals
provided by PHD- and/or bromodomain-containing transcription
factors (By similarity).
-!- SIMILARITY: Belongs to the TRIP-Br family.
